

Week5-Day1-Assignment2

Kindly review your office applications to identify tasks that involve significant manual effort and are time-consuming. Pinpoint a specific pain point where an AI agent can streamline the process and improve efficiency through automation

API Testing Agent (Very Powerful)

Pain Point

- Writing API test cases manually
- Validating responses repeatedly

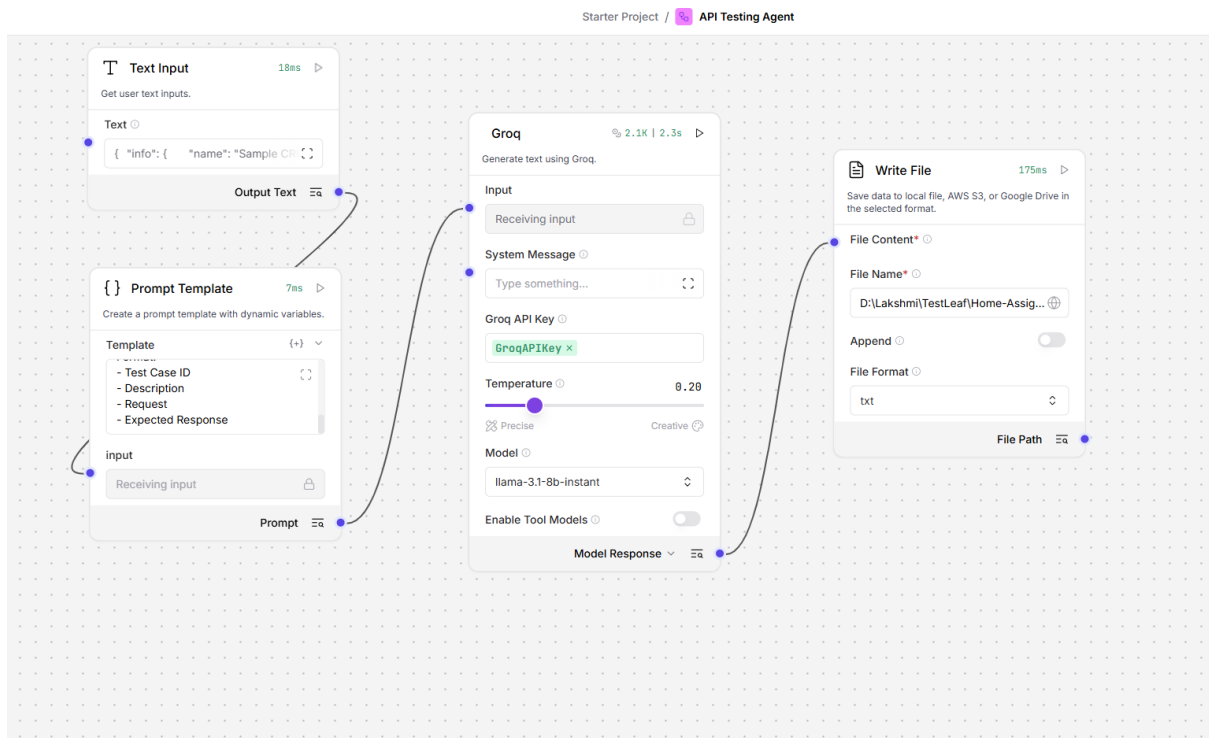

AI Agent Idea: API Test Generator + Validator

What it does:

- Input: API endpoint / Postman collection
- Output:
 - Test cases
 - Validation rules
 - Sample test scripts

Langflow Workflow

- File Input (Postman JSON)
- LLM → Generate tests

Prompt:

You are an API testing expert. Given the API details below: **{input}** Generate: 1. Functional test cases 2. Negative test cases 3. Edge cases 4. Validation checks 5. Sample automation code (Java RestAssured) Format: - Test Case ID - Description - Request - Expected Response
